

What is Sky Broadband Shield?

- Sky Broadband Shield is a set of tools designed by Sky to help make the internet a safer place for your whole family and offers the following features:

- **Malware Protection**

Sky Broadband Shield includes advanced protection which helps to defend against unwanted attacks, such as viruses, phishing or malware-infected sites.

- **Parental Controls**

Sky Broadband Shield now also comes with Safe Search: software that helps to protect young people from adult content. It filters explicit content out of search engine results so that you can feel safer allowing your children to browse the internet.

These controls work on all devices connected to Wi-Fi, meaning your children are protected whether they're on their phone, tablet, or games console.

Simple to set up and manage

Your Sky Broadband Shield will automatically be set so it's suitable for teenagers during the day and adults in the evening. This is easy to change at any time. Sky Broadband Shield means that parental control has never been easier.

1. Age Ratings

Our age rating system makes Sky Broadband Shield incredibly easy to use. With 3 pre-set age categories for you to choose from – PG, 13, or 18 – you can make sure your children are safe online with no effort at all. Just go to [your Broadband Shield settings](#) and select which one is best for your family. You can also customise, filter and tailor it more precisely to your family's needs.

2. Watershed

The watershed feature allows you to set your online parental controls depending on the time of the day. When you become a Sky customer, Sky Broadband Shield will

be automatically calibrated so it's suitable for children or teenagers during the day and adults in the evening. This is easy to change at any time in your Broadband Shield settings.

3. Block content

Using Safe Search, you can block any specific websites and exclude explicit images from search engine results with ease.
